**What were the Fund’s costs for the last year?**

(based on a hypothetical \$10,000 investment)

Class Name	Costs of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Class A	\$161	1.51%

**How did the Fund perform during the reporting period?**

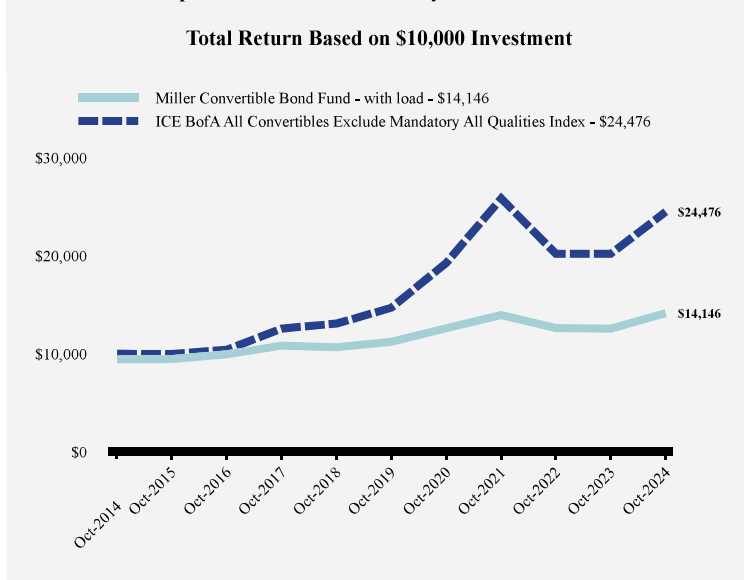

During the reporting period ending 10/31/24, the Miller Convertible Bond Fund underperformed the benchmark V0A0 index. Equity prices moved higher and bond yields turned lower, leading to the Fund’s underperformance.

Over the past year the broad equity markets were up over 30%. The average bond price in the benchmark index, V0A0, is six points higher than the Fund, making it more equity sensitive. The Fund was underweight technology and financials which also led to the underperformance. During the reporting period, equity returns in these sectors were up 51.25% and 46.39%, respectively.

Over the past year the yield curve shifted lower by 50 basis points. The duration of the Fund is approximately two years lower than the benchmark. In a period of falling interest rates, high duration portfolios generally outperform low duration portfolios. With respect to credit, the Fund has a higher credit quality than the benchmark index. In a “risk on” environment, lower credit quality outperformed higher credit quality.

The Fund remains positioned in a conservative manner with an average bond price near \$100. We are currently maintaining a low duration, to immunize the Fund from interest rate moves, and to minimize long-term business risk. The portfolio is constructed of high-quality credits due to our belief that investors are not adequately compensated for taking on corporate credit risk.
